

ERVIN

10 YEARS
GLAUBITZ PLANT

2012 Ground-breaking

In December 2012, construction of the new Ervin Amasteel plant in Glaubitz begins

2014 First Melt

The first complete production of Ervin Amasteel Shot and Grit in Germany

2016 Expansion

The extension of the Northern finishing department results in the first capacity expansion of the plant

2017 Test center

The test center is built and the second capacity expansion takes place in the southwest warehouse

2021 Expansion of the scrap hall

Additional storage space is created in the scrap hall to enable better storage and separation of the scrap

2022 Oxyfuel

The installation of a pure oxygen burner increases the flexibility of furnace operation

2024 Glaubitz wind turbine

Commissioning of the wind turbine:

The wind turbine is now supplying green electricity for the Glaubitz plant

2030 Net Zero

We are committed to reduce our carbon emissions to net zero by 2030 which is 15 years ahead of local government targets
